WALSH INTEGRATED

Walsh Rounds Tracker

Automate your Environment of Care Rounds

Using any tablet or phone, inspect the safety and compliance of any area in your facility.

Managing EOC rounds can be a real challenge.

Walsh Rounds Tracker puts the power you need to control this complex process in the palm of your hand.

Walsh Rounds Tracker is a single solution used by your entire team when performing EOC or any other rounding.

Typically, rounds consists of gathering a small group of very busy people to inspect conditions and compliance in a group of locations. Scheduling and coordinating are difficult enough, but getting people to finish their notes and submit them for reporting can be a real pain.

With Walsh Rounds Tracker, each team member has their own custom checklist on their own tablet or phone. They walk around and inspect any area, recording their findings, adding photos and notes, and creating follow-ups.

Once rounds are complete, all the data is instantly uploaded to a secure cloud server, and anyone tagged in a follow-up receives an email with all they need to know to act on those findings. They then login and update each ticket, adding photos and notes of their own, until the issue is closed.

Every interaction is documented, providing concrete proof of performance.

At the same time, all your reports are up to date and available: detailed audit reports with photos, trending, deficiency, performance and more.
